

When you have to say something, why not say it on a shirt? As the weather warms up, why not dress for comfort and style, while also sharing a message?

Graphic tees offer the words that some people don't want to speak, or that some people can't speak, like babies. A graphic tee could include a hipster mickey or #flawless.

This type of top is not hard to find-- almost every store has them. Any type of pants work great with this shirt. - R&A

Ask an 8th Grader

Dear Eighth Graders,

Do a review on the olv fair plz :)

From,
Derpjeff

Dear derpjeff,

My personal opinion on the OLV fair is that it's not so good. Now for the past years I have gone, prices have been high, the rides have been the same every year, and the food was not good. They have claimed this year that there will be new rides and new games. Now normally, I would say, "Now this leaves space for OLV to redeem themselves." But, last night when I was out with my parents, we drove past the field, and saw them setting up rides, but they are the same rides with different names. They still have "The Fire Ball" and "Musik Express" but with different names. Do not be fooled by the trick they are trying to play. They even still have the bee ride and the same kiddie rides.

So, to wrap up this article, it's a waste of money and time.

It's about \$20.00 for one wristband, and then the food is even more expensive. Also, I don't trust those moving death traps. Yes, the workers have to run them and check them for safety, but you never know how well they actually test them. Also, they could test them, see that they are perfectly fine, but then have problems and malfunctions when people are on the ride which may cause injury, just like how three years ago "The Fire Ball" was stuck upside down for hour. So sorry if I just ruined your plans, but trust me it's for the best.

Sincerely,
An Eighth Grader who's got Rhythm

*Note: this article does not reflect the opinions of the entire newspaper club staff. Others believe that the fair is a fun change for people who usually do the same things with their friends all the time. The fair will run from **May 11th to May 16th**. You can check it out for yourself, and share your opinions in the comments.*

Tribute to Antoine Lavoisier: The Father of Modern Chemistry

To many people, Antoine Lavoisier was the father of modern Chemistry. At the time, he was also a physiologist. He went to the renowned Collège Mazarin in Paris, France. There he learned the basics of mathematics, botany, and astronomy. Lavoisier's work was influenced by the French Enlightenment movement at the time, and was adaptable. He had a good reputation for being self-controlled and was elected the president of the French Academy of Science at the age of just 25.

His hypothesizing benefited geology and chemistry, experimenting with the impact of rust. Another well-known accomplishment was discovering the nature of respiration, and oxygen taken up by blood. During the Reign of Terror in France, he was found as an investor for a tax collection company which was unpopular at the time. As a result, he was executed by guillotine on May 8th 1794, 221 years ago, on this day! We should remember Antoine Lavoisier's legacy, and his contributions to science, biology, chemistry, geology, and much more! -Rohit M.

THIS DAY IN HISTORY

GAMING

Jason Combat

Jason Voorhees from Friday 13th and the Predator are in the new Mortal Combat X character pack.

So "get to the chopper" because the battle will be big. - Chris C. Warning: This game has been rated 18+, so you'll need to run it by your parents before getting the game...

Teacher Appreciation Week

THANKS!

Have you ever thought about a teacher who helped you and gave encouragement? Also, did you want to do something for your teacher? Well, this week is Teacher Appreciation Week. Our teachers have been helping us by teaching, making activities and worksheets, and finding videos online for us to understand the topic. If you can't give your teacher a surprise or a gift, all it takes to say is a "Thank You for Everything" because your teacher will be very happy. Go Now- though it's never too late to share anything you wanted to give or say as an appreciation to your teacher. *-Supritaa M.S.*

Happy Teacher Appreciation Week!

MAY 4-8 #THANKATEACHER

AWMS Windows Art Show

UPCOMING EVENTS

Throughout the entire school year here at AWMS, the Windows Art students from grades six to eight have been working hard on a multitude of art projects. Now, in just less than a week, we will be able to go and view these remarkable pieces of art! Next Wednesday, May 13, from 4 to 8 P.M., the Windows Art Show will take place in the media center. We hope that many of you go to see the amazing art created by our school's students! *By: Andy B. (Here's a sneak peak!)*

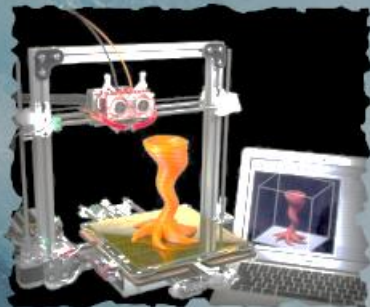

3-D Printers

4/29/2015

Reprinted due to word processing error

0 Comments

Have you ever had this great idea in your head and then you realize, how could I make this? Now you can with the new developments in printing. This new development is called 3-D printing. You design a shape/ creation on your computer and send it to the printer as seen in the picture. It is then produced

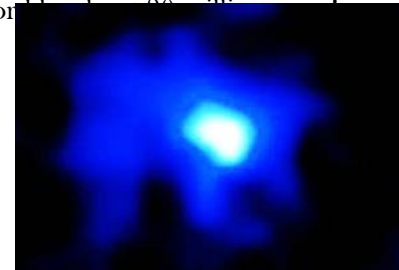

with a liquid that hardens into plastic and before your eyes, your childish dream of inventing something is now true. This has truly been the greatest advancement in printing probably ever since the printer was even invented over 600 years ago. *-Jordan*

TECHNOLOGY

The Vast Unknown

Space is indeed so vast and unknown, that humans will never be able to explore most of its mysterious regions. Although little is known about this dark world, every year scientists find fascinating new facts about it. Recently, astronomers have spotted a new galaxy that is 13.1 billion light years away. This galaxy was named EGS-zs8-1, and is considered to be the most distant one; beginning 670 million years after the Big Bang Theory. This galaxy's age beats the previous record.

However, astronomer Garth Illingworth says that the record isn't something that is hard to beat. With so many galaxies and planets, there is more than one space wonder that can achieve such history.

EGS-zs8-1 has been causing quite a buzz. According to astronomers, the new galaxy is growing at a super fast rate and is also larger in size than most galaxies about its age. Plus, EGS-zs8-1 currently produces its stars 80 times the rate of our current galaxy. Such active behavior is unusual and astronomers trying to take a closer look at their find. Although, neat pictures of this galaxy were taken, there is much to know about it. Being proclaimed as the oldest galaxy found, EGS-zs8-1 holds many untold stories humans have yet to find out.

Unfortunately, it is less likely that humans will ever reach the new galaxy. However its existence allows some room for interpretation. This new find proves that there is so much out there that humans haven't seen. Imagine thousands of galaxies each with their own planet Earths! Who knows what is found in the depths of the darkness? Maybe there are planets with strange creatures, or maybe there are even humans like us. And maybe just maybe, right now someone out there is sitting and writing about our own galaxy. The real question is, are they capable of reaching us?
