

Choral Spring Concert

Have nothing to do on Wednesday June 3rd? No problem! At 7:30 pm, AWMS will be holding its annual Choral Spring Concert. The evening will be filled with beautiful songs performed by our very own talented school chorus. Celebrating the wonders of spring,

SPRING CONCERT

the choir will be singing songs from famous musicals such as the Wiz and sweet spirituals that will certainly please your ears. The songs will be performed by sixth, seventh, and eighth graders and will feature a combined number in the end. The choir will be conducted and accompanied by our school's hardworking chorus teacher Mrs. Sabatino. As always the concert will include musical solos from various students, willing to showcase their talents. And a small tribute will be made by the eighth graders as they will perform a special piece to say their goodbye. This concert will be held in the school cafeteria, and is available for anyone to attend. Whether your child is performing or not, this is a fun and interesting event that is definitely worth coming to see. So, make sure you come by and help celebrate the students sing in the spring! *-Ekaterina Z.*

CHARLIE, CHARLIE

The new demonic game, Charlie Charlie, is trending everywhere. Kids all over the school are playing the game in between classes, in study hall, and outside during rec. Some say it works and others say that it's fake and a waste of time. The backstory says that Charlie was a young Spanish boy who committed suicide to speak to the devil. This game has been played for generations by children and has even been called "the poor man's Ouija board." Many people don't even know the game, so I'll explain it for you. "Charlie Charlie" is a game where you set up the board yourself with two pencils and a handmade board made of paper. You start by saying "Charlie, Charlie, are you here?" and wait for the pencils to move to yes. After that you can keep asking him questions, just

make sure to say goodbye and throw the pencils on the floor when you done!

If you're scared to play, don't be. This is along the lines of "Bloody Mary" and is only an urban legend. The pencil moves because people breathe heavily on them, the wind picks up, the house is drafty, or Charlie is in the room with you... Children have been playing this game for years and things can only go wrong if you allow them to. From everyone that's been playing the past few weeks nothing extreme has been reported, so don't get yourself worked up. Just play safe and don't be stupid. *-Faith :)*

Medical Advancements

Painless Shots

You've gone to the doctor and you've had to get a SHOT! You definitely didn't want to because you knew it would hurt. A new invention created by the college freshman science team named "Comfortably Numb" with computer science major Greg Allison, Bio engineering major Andy Zhang and mechanical engineering major Mike Hua at Rice University. The device is a Cold Pack Needle and how it works is there is a cold pack built in, so when the person presses the built-in mini, black cylinder it would inject into the person's skin and they would feel no pain.

The cold pack needle is only \$2.00 each for any hospital who wants to get a set for their patients. If you are really scared of getting a shot, then ask the nurse for a cold-pack needle so that you wouldn't have to go through all that pain. *-Supritaa*

Special Olympics Bake Sale

On Friday, May 22, many eighth grade students brought in extra money to spend at the bake sale held by the special education students. Throughout the day, the eighth grade study halls came down to the media center to buy and eat the baked goods, which were donated by the staff, as well as the students' families. While eating the cookies, brownies, cupcakes, and other baked goods, the eighth grade student were shown a video, explaining the purpose of the entire event - to raise money for the 2015 New Jersey Special Olympics. The video showed clips

from the Special Olympics and its importance to the students in our school. In fact, many of our special education students have participated in the Special Olympics, and have won medals in sports such as track and even swimming. They are eager to compete again, and the money from the bake sale will help them do so.

So, thank you for supporting the Special Olympics with your donations, and to the Special Education students and teachers who organized the event— thanks for the tasty snacks! We would like to wish our AWMS athletes good luck in the Special Olympics! *-Andy*

Anthony Wayne's Got Talent!

TALENT SHOW!

Lights. Camera. Action! There's been plenty of that at AWMS' newly introduced Talent Show. This past Thursday, May 21st, students of all different grades were able to take the stage, showing off their many talents and skills. Acts ranged from numerous talents, and everyone had fun showing off what they can do.

Hosted by our fellow student Anthony Gail, there were an outstanding number of people who participated. Some people, like Alex, found the chance to show off their wondrous piano skills. Playing a piece called "Dizzy Fingers", amazing everyone with his swift, graceful movements and increasing momentum as the song went on. In addition, the show started off strong, as Eddie kicked off the show with his piano cover of Sia's hit song, "Chandelier." Another talented individual, Isabelle, left everyone speechless with her playing "Song for Sienna" by Brian Crain. Additionally, no one can forget about Justine, with her terrific singing and playing that day that left everyone speechless.

Along with all these stunning pianists, many talented singers performed that day. Everyone loved watching as students such as Devon, Zack, and Tara took the stage, and were left awe-stricken when Deanna showed off her pipes with "If I Ain't Got You." Of course, who could forget Supritaa singing her beautiful cover of "Someone Like You." Adding to these breathtaking singers was Nalia, covering the sweet tune of Kodaline's "All I Want." She showed everybody just how amazing someone's voice can be...(Article continued along with a gallery of pictures on the website)- *Jeydanur B. Edited by: Ekaterina .*

Human Cloning:

Is it possible?
Is it right? Is it Worth it?

As the future becomes the present, ideas spoken only in science fiction movies are now becoming the reality. Dolly the sheep was the first animal to be scientifically cloned in 1996. It will almost be 20 years since the first animal was cloned, and scientists have been experimenting on cloning ever since. The question is can we clone humans?

The short answer: No. "Nobody in their right mind would want to do that." said John Gearhart, the director for the institute for Regenerative Medicine at the University of Pennsylvania. It might be possible, but we might never know. The U.S. Conference of Catholic Bishops saw the exponential development of cloning in the past few years, and they were concerned. As a result, they banned all research on human embryos, even if they would be destroyed in the process of research. There are also other factors acting as roadblocks from cloning a human. Studies done previously in the Oregon Health and Science University showed defects in embryos, even as soon as they are a 100 cell mass. When doing this, a few genes go wrong, and don't work, preventing us from making a real, healthy human clone... (To read Rohit's full article, visit the website: awactionnews.weebly.com)

TECHNOLOGY

Comparing Wearable Tech

There have been many new releases of wearable tech. Samsung, Motorola, LG, and even Apple has released their own watches/ wearable technology. With all of these new watches, people are having a hard time deciding which kind to get. All four of these companies' watches have their ups and downs.

The Apple watch seems to be not as good as the others. It has a square shape appearance and is fully equipped with IOS. It only weighs 1.41 ounces, so it is not like having a rock on your arm. Apple has not released its battery and storage information. One other bad thing is its price which starts at \$349.99.

A better option would be the Moto 360 by Motorola which has a starting price of \$250. It is the cheapest one out of all four of them. It has a round shape and is only 1.7 ounces. It has 4 GB of storage and 320 mAh.

Another competitor could be the Samsung Gear S by Samsung that cost \$299. It is in the shape of a square and only weighs 2.36 ounce. It holds 4 GB of storage and has battery that last 300 mAh.

The last piece of wearable tech is the LG G Watch R from LG and costs only \$299. It has a round display and only weighs 2.18 ounces. It holds 4 GB of storage and 410 mAh.

Out of all of these it is hard to say which one is the best. You could help us decide by going to our website and commenting what you think. *-Jordan*

One of our favorite fans requested that we add jokes to the

paper, so here's the first one from Lascelle: What did the chicken invent? (Flip to the back for the answer)
